

Napoleon Invasion of Russia, 1812

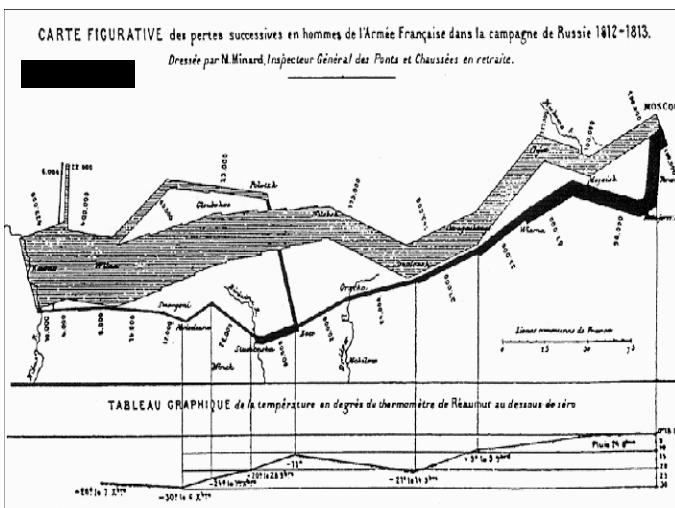

Visualization and Data Mining

Napoleon

2

ST00page00 9/12/01 7:42 AM Page 1

Map representing the losses over time of French army troops during the Russian campaign, 1812-1813.

Constructed by Charles Joseph Minard, Inspector General of Public Works, retired.

Paris, 20 November 1869

The number of men present at any given time is represented by the width of the grey line; one mm indicates ten thousand men. Figures are also written besides the lines. Grey designates men moving into Russia; black, for those leaving. Sources for the data are the reports of the Inspector General of Public Works, which were presented to the Ministry of War on October 28, 1813, and on 28 October, 1814. In order to visualize the army's losses more clearly, I have drawn this as if the units under Prince Jerome and Marshall Davout (temporarily separated from the main body) had stayed with the army throughout.

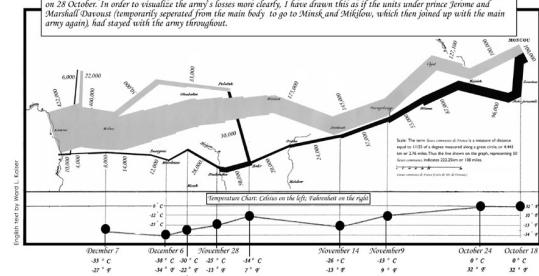

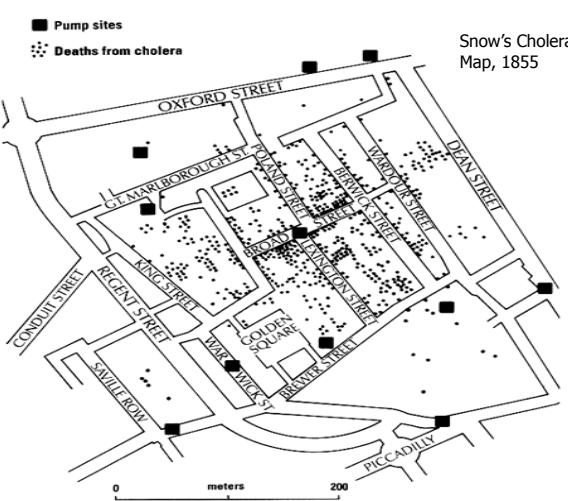

Figure 58. Minard's map of Napoleon's Russian campaign.
This graphic has been translated from French to English and modified to most effectively display the temperature data.

4

Asia at night

6

South and North Korea at night

North Korea
Notice how dark it is

Seoul,
South Korea

7

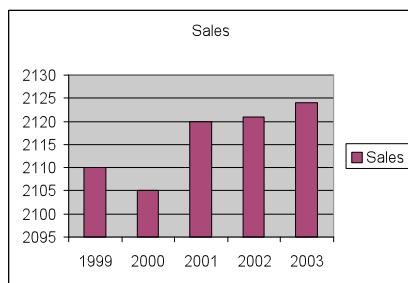

Visualization Role

- Support interactive exploration
- Help in result presentation
- Disadvantage: requires human eyes
- Can be misleading

8

Bad Visualization: Spreadsheet with misleading Y -axis

Year	Sales
1999	2110
2000	2105
2001	2120
2002	2121
2003	2124

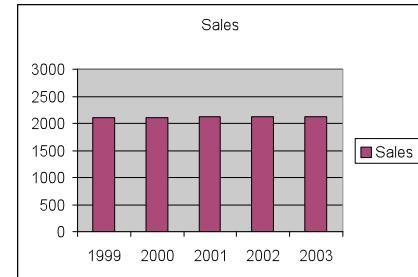

Y-Axis scale gives **WRONG** impression of big change

9

Better Visualization

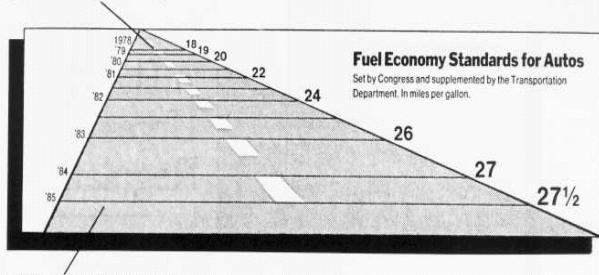

Year	Sales
1999	2110
2000	2105
2001	2120
2002	2121
2003	2124

Axis from 0 to 2000 scale gives correct impression of small change

10

This line, representing 18 miles per gallon in 1978, is 0.6 inches long.

Lie Factor=14.8

New York Times, August 9, 1978, p. D-2.

(E.R. Tufte, "The Visual Display of Quantitative Information", 2nd edition)

11

Lie Factor

$$\text{Lie Factor} = \frac{\text{size of effect shown in graphic}}{\text{size of effect in data}} =$$

$$= \frac{(5.3 - 0.6)}{\frac{0.6}{(27.5 - 18.0)}} = \frac{7.833}{0.528} = 14.8$$

Tufte requirement: $0.95 < \text{Lie Factor} < 1.05$

(E.R. Tufte, "The Visual Display of Quantitative Information", 2nd edition)

12

Tufte's Principles of Graphical Excellence

- Give the viewer
 - the greatest number of ideas
 - in the shortest time
 - with the least ink in the smallest space.
- Tell the truth about the data!

Visualization Methods

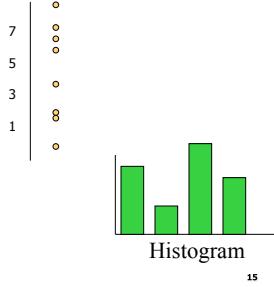

- Visualizing in 1-D, 2-D and 3-D
 - well-known visualization methods
- Visualizing more dimensions
 - Parallel Coordinates
 - Other ideas

(E.R. Tufte, "The Visual Display of Quantitative Information", 2nd edition)

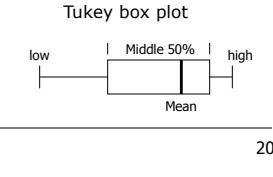

13

1-D (Univariate) Data

- Representations

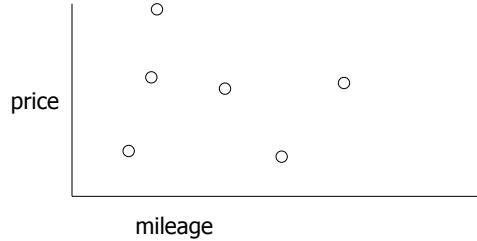

15

14

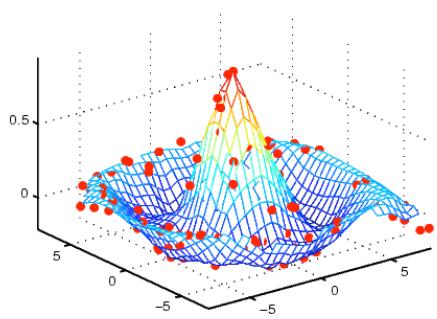

2-D (Bivariate) Data

- Scatter plot, ...

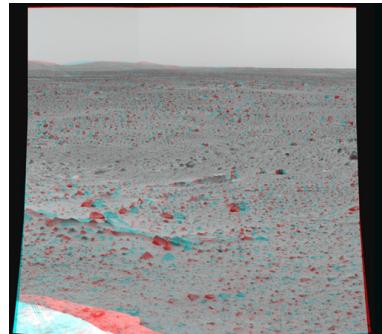

16

3-D Data (projection)

17

3-D image (requires 3-D blue and red glasses)

Taken by Mars Rover Spirit, Jan 2004

18

Visualizing in 4+ Dimensions

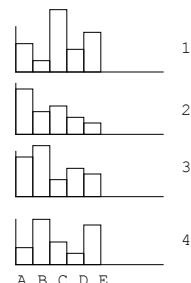

- Scatterplots
- Parallel Coordinates
- Chernoff faces
- ...

19

Multiple Views

Give each variable its own display

	A	B	C	D	E
1	4	1	8	3	5
2	6	3	4	2	1
3	5	7	2	4	3
4	2	6	3	1	5

Problem: does not show correlations

20

Scatterplot Matrix

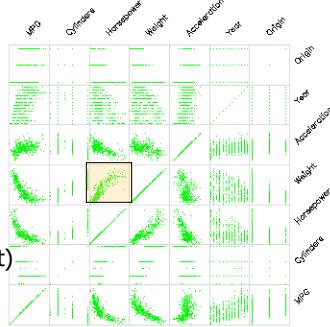

Represent each possible pair of variables in their own 2-D scatterplot (car data)

Q: Useful for what?

A: linear correlations
(e.g. horsepower & weight)

Q: Misses what?

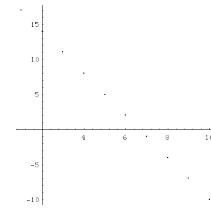

A: multivariate effects

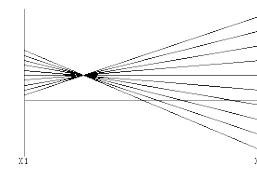

21

Parallel Coordinates

- Encode variables along a horizontal row
- Vertical line specifies values

Dataset in a Cartesian coordinates

Same dataset in parallel coordinates

Invented by
Alfred Inselberg
while at IBM, 1985

Example: Visualizing Iris Data

Iris setosa

sepal length	sepal width	petal length	petal width
5.1	3.5	1.4	0.2
4.9	3	1.4	0.2
...
5.9	3	5.1	1.8

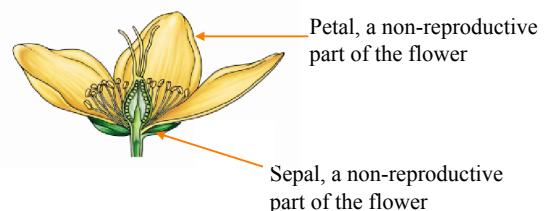

Iris versicolor

Iris virginica

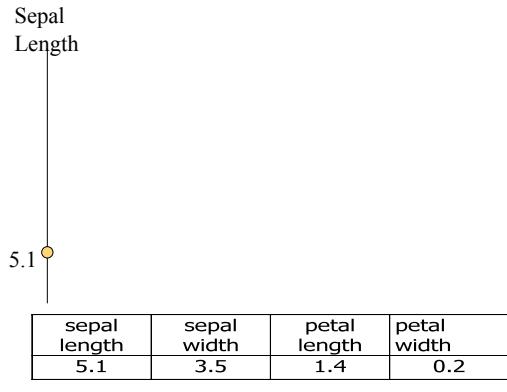

23

Flower Parts

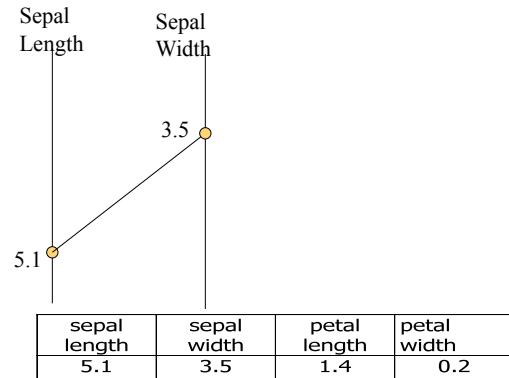

24

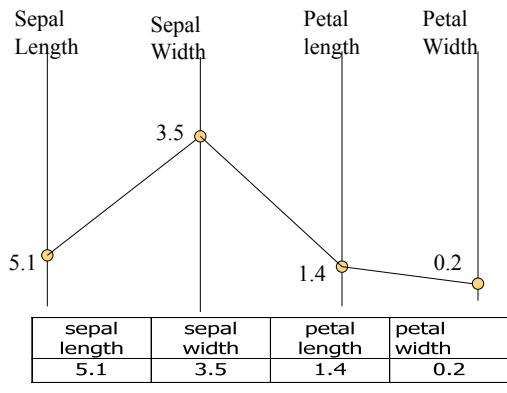

Parallel Coordinates

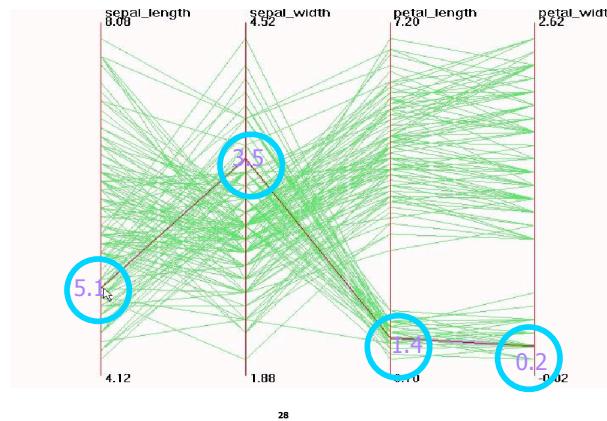

Parallel Coordinates: 2 D

Parallel Coordinates: 4 D

Parallel Visualization of Iris data

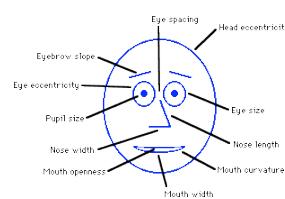

Parallel Visualization Summary

- Each data point is a line
- Similar points correspond to similar lines
- Lines crossing over correspond to negatively correlated attributes
- Interactive exploration and clustering
- Problems: order of axes, limit to ~20 dimensions

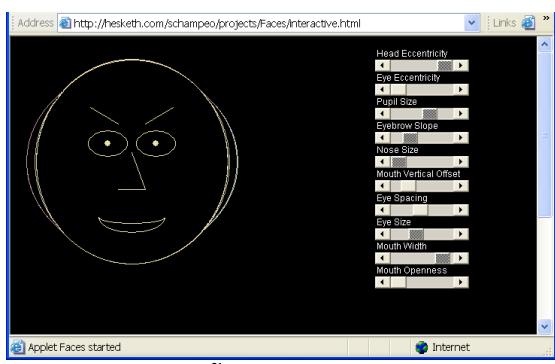

Chernoff Faces

Encode different variables' values in characteristics of human face

Cute applets: <http://www.cs.uchicago.edu/~wiseman/chernoff/>
<http://hesketh.com/schampeo/projects/Faces/chernoff.html>

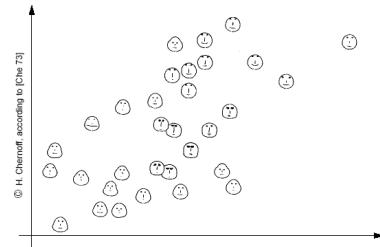

Interactive Face

31

Chernoff faces, example

Chernoff-Faces [Che 73, Tuf 83]

32

Visualization Summary

- Many methods
- Visualization is possible in more than 3-D
- Aim for graphical excellence

33
